Good Gum Health Starts with a Clean Sulcus

Extremely Tapered Bristles (ETB)

Precision tapering enables the Extremely Tapered Bristles (ETB) to penetrate more deeply to clean up to 2.7 mm into the sulcus and clean up to 1.4 cm along the gingival margin and between the teeth.¹ The upper 6 mm of the bristle is tapered to a rounded 0.01 mm end. Ordinary, rounded bristles have less than 0.5 mm tapered to 0.02 mm.

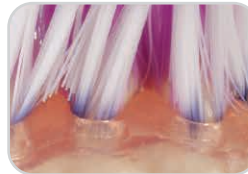

Available on: Technique® Deep Clean, Technique® Sensitive Clean and Sonic Power Deep Clean

Beneath the Sulcus

2.7 mm into the sulcus¹

Between the teeth**

1.4 cm interproximal¹

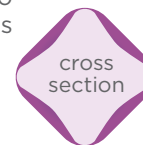

Quad-Grip® Thumb Pad

The Quad-Grip® handle was designed to guide the hand to hold the brush at 45° in all quadrants so the bristles are properly positioned at the sulcus for optimal subgingival cleaning.

The Quad-Grip® handle promotes the modified Bass technique.

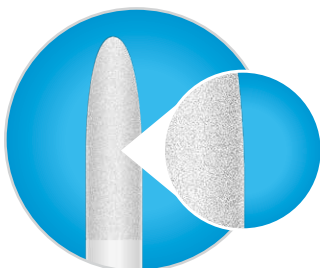

Available on: All Technique® Toothbrushes

Dome Trim® Bristle Design

Dome Trim® bristles are clinically designed to clean below the gumline^{2,3} where periodontal disease starts. The dome shape bristling structure helps promote the recommended 45° angle when using the modified Bass technique.

Available on: Technique® Complete Care, Technique® Sensitive Care, Technique® Classic, Super Tip®, Micro Tip®, Dome Trim®

Textured Bristle Tips

Bristles are specially processed to create a surface texture that picks up the plaque for enhanced plaque removal.

Available on: All GUM® toothbrushes (excluding Technique® Deep Clean)
